

Local File Transfer - User Manual

Overview

This application enables secure, high-speed file transfers between devices connected to the same local network. No internet connection is required after setup.

Sending Files

1. Open the application.
 2. Connect to the desired device.
 3. Drag and drop files or click the "Select Files" button.
 4. Review the selected files.
 5. Click "Send."
 6. Monitor transfer progress.
-

Receiving Files

1. Wait for an incoming transfer request.
 2. Review the sender and file details.
 3. Choose "Accept" or "Reject."
 4. Accepted files are saved to the configured download folder.
-

Connecting Devices

Automatic Discovery

Devices on the same network appear automatically.

QR Code

Scan the QR code displayed by the desktop application.

Manual Connection

Enter the IP address of the other device if automatic discovery is unavailable.

Transfer History

The History page displays:

- File name
- Sender
- Receiver
- Date and time
- File size
- Transfer status

Users may search, filter, or clear the history.

Settings

Customize:

- Device name
 - Download folder
 - Upload folder
 - Theme
 - Port number
 - Auto-save behavior
 - Auto-accept transfers (optional)
 - Maximum upload size
-

Security

- All transfers remain within the local network.
 - Incoming transfers require user approval unless auto-accept is enabled.
 - No files are uploaded to cloud services.
 - No user data is collected or transmitted externally.
-

Best Practices

- Use a 5 GHz Wi-Fi network or wired Ethernet for the best performance.
 - Keep the application updated.
 - Verify available storage before transferring large files.
 - Avoid interrupting the network connection during active transfers.
-

Typical Performance

- 100 Mbps LAN: approximately 10–12 MB/s.
- 1 Gbps LAN: approximately 100–115 MB/s.
- Modern Wi-Fi 5: approximately 30–80 MB/s.
- Modern Wi-Fi 6: approximately 80–150+ MB/s, depending on device capabilities and signal quality.
